pivot table

A pivot table is an Excel tool used to summarize and analyze amounts of data. It helps us calculate tables counts and averages. It also help us compare easily.

Example

Employee	Department	Salary
Arun	HR	5000
Priya	IT	8000
kumar	HR	3000
Divya	IT	6000

Create a pivot table

Department	Total sales
HR	8000
IT	14000
Grand total	22,000

How to create a pivot table

Step1: Select your complete data Headings include pannanum.

Step2: Click insert → pivot table choose New worksheet → ok.

step3: Drag the fields Department → Rows; Sales → values.

Power pivot table

Power pivot table excel tool used to analyze large amounts of data, connect multiple tables, and create advance calculations.

Bring data from Excel tables or other sources → import data

Connect related tables using a common column, such as Employee ID → create relationship.

Step3: Create calculations

Use DAX formula to calculate total sales, average, and more.

Create a report → use a pivot table to Summarize and analyze the connected data

Advance Excel

Lookup

Definition:

Lookup is used to search for a value in a row or column and return a related value.

Example:

Eg Lookup (Lookup_value, lookup_vector, [result_vector])

Lookup (Lookup_value, array)

EID	Name	Salary
101	Arun	20000
102	Jyothi	25000
103	Pooja	30000

You want to find the salary of employee 102.

= Lookup (F7, $A$2:$A$21, $B$2:$B$21)

F7 → EID

$A$2:$A$21 → Employee name

$B$2:$B$21 → Salary.

Disadvantage of Lookup

Approximate match

Data Sorting

First or last matching values

Limited flexibility

Errors with missing value.
