

06-10-2026

DA 8% OF BS

DA is salary calculation, DA usually Basic Salary - percentage calculate pannuvanga

Example: $-\left(\frac{\text{Salary}}{\text{Basic}}\right) * 10\%$

calculate $-\text{Basic Salary} * 8\%$

HRA 12% OF BASIC WITH DA

First add Basic salary + DA then calculate 12% HRA

Example

Basic
10000

DA 8% OF BS
800

HRA 12% OF Basic with DA
 $= \frac{1012}{\text{Basic}} * 12\% + \frac{12}{\text{DA}} * 12\%$

TA - Travel allowance

It is an amount given to an employee to cover travel/ transportation expenses related to work

Formula : = IF (logical_test, [value_if_true], [value_if_false])

Example :

$$= \text{IF}(F_2 = \underbrace{\$F\$4}_{\downarrow F_4}, \underbrace{4000, 0}_{\downarrow \text{value-false}})$$

Bonus = Extra payment.

Bonus = Extra payment.

A bonus is additional money given to an employee, usually for good performance, achieving targets, or during festivals.

Formula = IF

Example:

$$\text{Bouns} = 3000$$

$$= IF \left(F_2 = \frac{\$F\$3}{F_4}, E_2 = \frac{\$E\$5}{F_4} \right) * 3000$$

INCENTIVE

INCENTIVE

A incentive is extra money given to an employee for good performance or reaching a specific target.

Formula = IF

Example.

$$= IF/OR(D2 = \$D\$11, F2 = \$F\$18), 5000, 0)$$

Or = Either one of two conditions.

PF is a retirement savings amount deducted from an employee's salary. The employee also contributes to it.

$$\text{Example} = \frac{G12}{G121} * 15\%$$

Basic salary calculated.

How to tax with calculated salary

Tax = IF

Example: $=IF(G12 \leq 5000, 0, IF(G12 \leq 10000, 100, IF(G12 \leq 15000, 200, IF(G12 \leq 20000, 300, 400))))$

Salary	tax
≤ 5000	0
> 5000 and ≤ 10000	100
> 10000 and ≤ 15000	200
> 15000 and ≤ 20000	400
> 20000	

it is also = IFS formula Used to it.

NET SALARY

It is the amount you get after deducting PF, tax and other deductions from your total salary.

Example:

$$= \text{IF/OR} (D2 = \$D\$11, F2 = \$F\$18), 5000, 0)$$

Or = Either one of two conditions.

PF is a retirement savings amount deducted from an employee's salary. The employee also contributes to it.

$$\text{Example} = \frac{G12}{G121} * 15\%$$

Basic salary calculated.

How to tax with calculated salary.

Tax: = IF

$$\text{Example: } = \text{IF} (G12 \leq 5000, 0, \text{IF} (G12 \leq 10000, 100, \text{IF} (G12 \leq 15000, 200, \text{IF} (G12 \leq 20000, 300, 400))))$$

Salary	Tax
≤ 5000	0
> 5000 and ≤ 10000	100
> 10000 and ≤ 15000	200
> 15000 and ≤ 20000	400
> 20000	

it is also = IFS formula used to it.

NET SALARY

It is the amount you get after deducting PF, tax and other deductions from your total salary.

~~For~~ Syntax = SUM

Example: = SUM (G12:L2)

(Salary + DA + HRA + TA + Bouns)
(Net salary).

GROSS SALARY

Total salary before deductions

PF + TAX + NET SALARY

Example: = Q2 + D2 + N2

Financial Function

PV - Present Value

FV - Future Value

PMT - fixed payment per period

IPMT - Interest portion of the payment in a given

RATE - Interest rate per period.

NPER - Number of periods needed

PV

PV means Present Value. It calculates the current values of money that you will receive or pay in the future.

Syntax:

= PV (rate, nper, pmt, [fv])

Rate - Interest rate per period

Nper - Number of periods

Pmt - payment made each period

FV - Future value

~~Exat~~ Example:

$$= PV (10\%, 10, 10000)$$

^{FV} Principal	Amount	Rate of Interest	Time	PV
80000		10.50%	10	₹1,416.05

SYNTAX: $= PV(\text{rate}, \text{nper}, \text{pmt}, [\text{fv}], [\text{type}])$

(Ex) $= PV(D31, B31*4, [31])$

FV - Future Value

Meaning: Future value is the amount of money you will have in the future after earning interest for a certain period.

SYNTAX:

$$= FV(\text{rate}, \text{nper}, \text{pmt}, [\text{pv}], [\text{type}])$$

PV	Rate	Time	FV
-25000	8.25%	5	$= FV(C22, D22, B22,)$

PMT - payment made each period

PMT calculates the regular payment amount needed for loan or investment.

SYNTAX:

$$= PMT(\text{rate}, \text{nper}, \text{pv}, [\text{fv}], [\text{type}])$$

Example: You take a ₹1,00,000 loan at 10% annual interest for 2 years.

$$= PMT(10\%/12, 24, 100000)$$

PPMT - Calculates the principal part of a loan payment.

SYNTAX:

= PPMT (rate, per, nper, PV)

per $\rightarrow$ payment period

Example:

= PPMT (C16/12, 1, D16*12, B16)

IPMT: - Calculates the Interest part of a loan payment.

SYNTAX:

= IPMT (rate, per, nper, PV)

Example:

= IPMT (C19/12, 1, D19*12, B19)

RATE

Calculates the interest rate of a loan or investment.

SYNTAX:

= RATE (nper, pmt, PV)

Example

= RATE (C28*4, B28, D28)

NPER

Calculate the number of payment periods needs for a loan or investment.

SYNTAX:

= NPER (rate, pmt, PV)

Example:

= NPER (C34/12, B34, D34)
